

YMCP is the TOTAL fresh cow product.

YMCP Vitall is designed for use on every fresh cow containing live yeast to get cows back on feed sooner **and** critical recovery-nutrients that competitive products don't have.

All TechMix animal health products are science-designed to enhance nutrient transport, hydration and absorption. Convenient YMCP Vitall helps the transition cow adjust to a new diet and meet the demands of lactation.

Directions for use

- Provide 2 boluses to fresh cow shortly after calving
- Repeat at 12-24 hours as needed

Available

- 12- pack case

More absorbable **nutrients** for
fresh cows... in a bolus.

At TechMix we realize the importance of hydration.

What we believe

We believe hydration is the single most important component to the well-being and performance of your animals.

We believe that during stress events, animals don't drink enough water – leading to dehydration – and don't consume enough critical nutrients.

We believe hydration innovation is a critical component to your success.

Who we are

We are TechMix. Hydration is in our DNA.

We are TechMix. We invented BlueLite – and from this technology platform, we develop products to meet the ongoing needs of producers - both today and in the future. BlueLite is the first hydration product to address the specific needs of individual species including swine, beef, dairy and companion animals.

We are TechMix.

Redefining hydration
to keep animals
drinking, eating & producing.

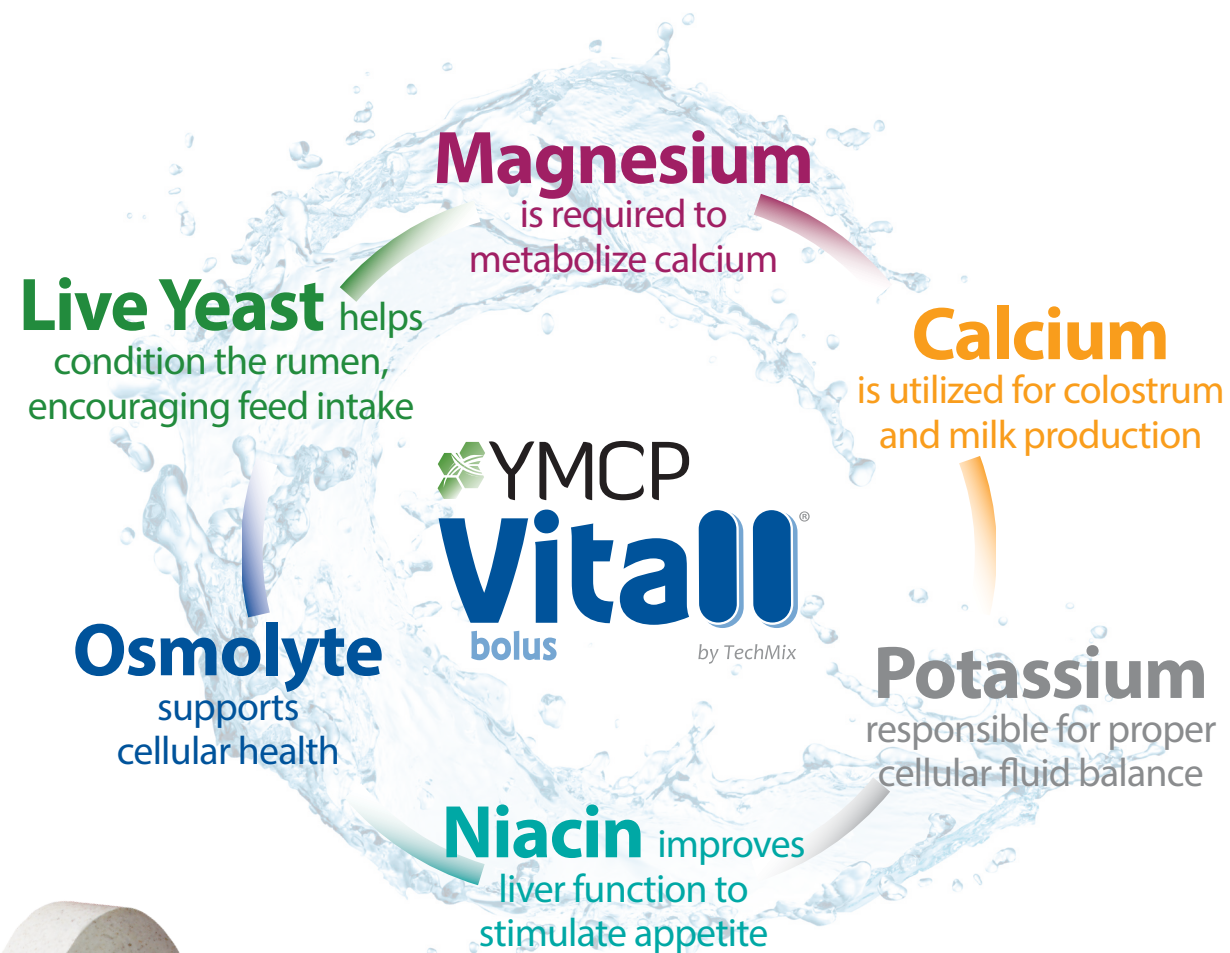

Redefining hydration
to keep animals
drinking, eating & producing.

Because fresh cow **recovery** requires
more than just calcium.

A lot more!

YMCP Vitall®

Introducing the innovative extension of the YMCP brand — respected and trusted by veterinarians worldwide — YMCP Vitall provides the proven effectiveness of YMCP in the convenience of a bolus.

EFFERVESCENT!
for optimal
dispersion in rumen

The **only bolus** with
proven results on **feed intake**,
production and **blood calcium.**

- **Patented technology**
protects live yeast which helps cows adapt to changing diet and get on feed sooner
- **Multiple calcium sources**
including quick-absorbing CaCl
- **Unique effervescent bolus**
for optimal rumen dispersion
- **Shelf stable**
so it's ready when your cow needs it
- Studies show **increased daily milk weights** and **feed intake** following administration
- Science-designed for **more absorbable nutrients** than competitive products
